

THANK YOU FOR BEING OUR CUSTOMER!

Our masks are the perfect, COMFORTABLE, addition to your wellness toolbox. In combination with other established safety measures like social distancing and enhancing the immune system, our masks help protect you and your community from the spread of airborne particles. As manufacturers located in the USA, our experience comes from years of providing scrub wear to leading nursing schools across the country.

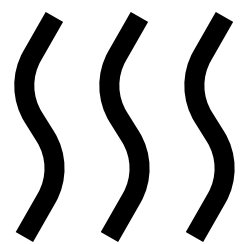

Our masks are not just another cotton mask. Our MicroFiber masks are an investment in the comfort and safety of your employees and community. They are thin with a reason. Thick masks may appear to have added protection but can make it very difficult for the wearer to breathe and may trap odor and exhaled CO₂ through the mask. Our thinner masks offer both protection and comfort. Reusable masks are kinder to the environment by eliminating the waste that occurs with disposable masks. We do not make use of elastic, as many individuals have an allergic reaction to this material.

MaskMe masks are made with the proprietary SilverPlus® which is powered by ATB-UV+ Silver®, an antibacterial technology embedded into the microfibers. Silver releases positive ions that attach to the negative ions of bacteria. This unique fabric structure also enhances sweat-wicking and quick-dry dispersion, helping to regulate body temperature and keep you odor-free. When required to wear a mask all day, a comfortable, breathable, anti-bacterial mask is key to your satisfaction.

FACTS AND TRIVIA ABOUT OUR MASKS

Technology

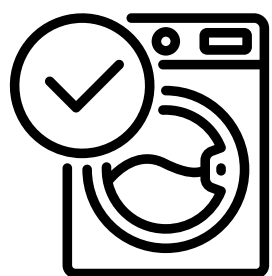

Keeps You Dry and Comfortable

As you perspire, bacteria form in your garment, which causes odor. This breakthrough technology combined with moisture management keeps the fabric dry, cool, fresh, and comfortable.

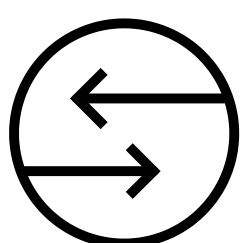

Wicks Moisture Away

Our fabric is hydrophilic. It wicks away perspiration from the skin, moving the moisture to the outer surface of the mask, where it evaporates. Many other fabrics are hydrophobic, which have a chemical attraction to sweat and oily dirt, trapping moisture next to the skin.

Fabric is Machine Washable

Our fabric is machine washable, releasing stubborn stains and odors with no pretreatments. Other fabrics trap stains and odors. Over time, their look and smell deteriorate significantly.

Fabric Prevents Dirt and Oil Transfer

Our fabric prevents dirt and oil transfer in the wash cycle. With no soil redistribution, white stays white - wash after wash after wash. Other fabrics continue to pick up dirt and oil in the wash cycle, turning white gray over time.
